PROFESSIONAL SUMMARY

Multidisciplinary Product Designer with 8+ years of experience building strategy and experience through design, design systems, brand systems, and product redesigns for complex B2B SaaS products and startups. Helped design products that reduced company operational costs by up to seven figures. Works closely with developers to maximize collaboration and the execution of work.

EXPERIENCE

Lead Product Designer, Athos Commerce

Nov 2023 – Present

- Designed operational workflows for merchant-facing B2B SaaS: transaction history, payouts, personalization settings, A/B testing reports, and real-time status updates for hundreds of retailers.
- Led discovery with merchants and operators. Interviews and user flows revealed workarounds users had built to automate their work, which led to a native automation feature with 40% adoption.
- Designed responsive experiences across desktop, tablet, and mobile so merchants can check their business from anywhere, with production-quality work on all three.
- Built a design system for data-heavy interfaces using MUI, Figma tokens, and variables. Table, filter, and detail-page patterns scaled across product acquisitions and full rebrands without pausing development.

Lead Product Designer (Fractional), Series AI

January 2024

- Designed a group-chat collaboration model for Rho Engine, an AI game engine, with agent labels, @mentions, and a /prt command, giving writers with little AI experience control over when agents speak.
- Designed a plan/execute workflow with an editable plan window to keep AI token costs down; industry benchmarks estimate this pattern cuts token usage by 40–70%.
- Applied atomic design thinking to worldbuilding, creating a continuity system that flags dependent story elements after a change. Validated early mockups with engineers. The V1 shipped and became the foundation of a core feature in the company's investor growth plan.

Senior Product Designer, Ateliware

July 2021 – Nov 2023

- Designed operational products across agriculture, finance, and insurance. Owned end-to-end design for operator workflows: configuration screens, data reporting, and real-time status tracking.
- Partnered with the CTO to create a game design division. Designed an educational game concept that secured $760K in investment and a major client in the gaming industry.

Freelance Product Designer

Feb 2018 – July 2021

- Led discovery with clients to frame problems before designing. Owned end-to-end design for web and mobile projects.

Graphic Designer, Mediaweb

Feb 2016 – Nov 2017

- Created visual assets and brand materials for institutional clients at a marketing agency.

EDUCATION

Architecture and Design (4 years) | PUCPR — 2016

Bachelor of Arts in Filmmaking | Centro Europeu — 2018
